ABOUT ME

Highly motivated AWS DevOps professional with 7 years of experience in DevOps, Infrastructure as Code (IaC), containerization, and AWS cloud services. Expertise in designing scalable cloud architectures, implementing DevOps best practices, and streamlining software delivery pipelines for enhanced efficiency and reliability.

PROFESSIONAL SUMMARY

- Automated and performed build, test and deployments using CI/CD pipelines integrated with Bitbucket, Jenkins, JFrog, SonarQube, Ansible Tower, XL Release & Deploy.
- Implemented AWS ROSA (Red Hat OpenShift Service on AWS) clusters to run IBM applications, ensuring high availability and scalability.
- Worked on DevOps maturity assessments and implemented DevOps tools, enhancing CI/CD automation, infrastructure as code, and operational efficiency.
- Leveraged AWS Bedrock to integrate generative AI into DevOps workflows for intelligent automation and observability insights.
- Designed and implemented AWS Landing Zone using AWS Control Tower, AWS Organizations, SCPs, and IAM, ensuring multi-account governance, security, and compliance.
- Provisioned and managed ECS clusters with task definitions, services, and ALB integration, optimizing containerized application deployments.
- Implemented AWS ElastiCache to optimize performance and reduce database load.
- Provisioned AWS infrastructure using Terraform following cloud-native architectures and best deployment models while implementing security best practices for compliance and governance.
- Migrated 1300+ on-premises/MS Azure servers, applications, SMB, NFS to AWS using AWS MGN, AWS CMF, AWS DMS, AWS DataSync, and VM Import/Export, ensuring 30% cost savings.
- Optimized AWS cloud costs, implementing best practices to enhance performance.
- Developed serverless automation using AWS Lambda and EventBridge.
- Automated log monitoring workflows in CloudWatch, improving observability.
- Remediated vulnerabilities across CI/CD tools and AWS infrastructure resources.
- Deployed highly available and disaster recovery (HA/DR) solutions in an AWS cloud environment.

CORE COMPETENCIES

- Cloud Migration & Modernization, DevOps & Infrastructure Automation (CI/CD, IaC), Containerization & Orchestration (Docker, Kubernetes, ECS, ROSA), Cloud Security & Compliance, Monitoring & Observability, Incident & Problem Management, Stakeholder Management, Leadership & Collaboration, Analytical Thinking & Adaptability

TECHNICAL SKILLS

- **DevOps:** Jenkins, Ansible, BitBucket, GitHub, GitHub Actions, SonarQube, Jfrog, XL Release & Deploy, Terraform, Terragrunt, Packer
- **Containerization:** Docker, Kubernetes, ROSA on AWS
- **AWS Services:** IAM, KMS, EC2, S3, RDS, VPC, Auto Scaling, ECS, ALB, Lambda, SQS, SNS, WAF, CloudFront, Systems Manager, Secrets Manager, FSx, EBS, EFS, CloudWatch, CloudTrail, EventBridge, AWS Bedrock, AWS Backup, ElastiCache, AWS Control Tower, AWS Organization
- **Cloud Migration:** AWS Application Migration Service (MGN), AWS DataSync, AWS Database Migration Service (DMS), AWS Cloud Migration Factory (CMF), VM Import/Export
- **Monitoring & Observability:** Dynatrace, Splunk, Brinqa, CrowdStrike, Datadog, NewRelic
- **Scripting:** Python, Shell Scripting, Groovy
- **Operating Systems:** Amazon Linux, CentOS, RHEL, Windows

WORK EXPERIENCE

Rackspace Technology | Bangalore

Professional Services Delivery Engineer - DevOps

Apr 2025 - Present

- Designing and maintaining CI/CD pipelines using Jenkins, Bitbucket, JFrog, SonarQube, and Ansible to ensure smooth and automated deployments of infrastructure and applications.
- Executing cloud migration activities with AWS DMS, AWS MGN, AWS Cloud Migration Factory and AWS DataSync to transition workloads to AWS efficiently and with minimal downtime.
- Using Terraform, Terragrunt and Packer to provision AWS infrastructure, set up scalable and secure environments, and configure EKS clusters for efficient container orchestration.
- Documenting and optimizing DevOps workflows, including CI/CD processes, infrastructure provisioning, and deployment strategies to promote consistency and team alignment.

Cognizant Technology Solutions | Bangalore

Senior AWS DevOps Engineer

Apr 2024 - April 2025

As part of the AWS ProServ team, I lead the migration and transformation of on-premises Data Centers and MS Azure workloads to AWS, leveraging DevOps practices for infrastructure provisioning, CI/CD, and operational excellence.

- Automated AWS infrastructure provisioning using Terraform and implemented Landing Zone creation to standardize multi-account governance and security controls.
- Designed and managed cloud migrations, integrating CI/CD pipelines for seamless deployments.
- Optimized infrastructure lifecycles, applying DevOps best practices.
- Enhanced observability through CloudWatch, Datadog, and Splunk for proactive monitoring.
- Led migration wave planning for servers, applications, SMBs, NFS ensuring minimal downtime.
- Worked on cloud migrations using AWS MGN, AWS DMS, AWS CMF, AWS DataSync.

IBM India Private Limited | Bangalore

AWS DevOps Specialist

May 2023 - Apr 2024

- Built and managed CI/CD pipelines with Jenkins, Bitbucket, JFrog, SonarQube and Ansible for seamless infrastructure and application deployments.
- Automated AWS infrastructure provisioning using Terraform, Packer for secure and scalable deployments and configured ECS clusters, ensuring optimized container orchestration.
- Streamlined DevOps workflows, documenting CI/CD, provisioning, and deployment strategies.
- Improved observability and security, integrating CloudWatch, Brinqa, Splunk, IAM policies, and Secrets Manager.
- Worked on cloud migrations using AWS DMS, Application Migration Service, and DataSync.

Wipro Limited | Chennai

Senior DevOps Engineer

Oct 2018 - May 2023

As part of the BAHS program, I worked on modernization of Transport for NSW's workloads, transitioning from legacy systems to AWS using DevOps best practices.

- Developed Jenkins pipelines using Groovy declarative approach for CI/CD automation.
- Built and deployed IBM IIB Integration BAR files for application deployments.
- Configured and deployed Red Hat OpenShift (ROSA) clusters on AWS, to host IBM applications, ensuring higher availability and scalability.
- Developed Ansible playbooks for configuration management and created Docker images.
- Worked on DevOps maturity assessments and administered DevOps tools, enhancing CI/CD automation, infrastructure as code for seamless operations.
- Provisioned, configured and managed AWS services using Terraform, like EC2, Lambda, SQS, SNS, EventBridge, RDS, Load Balancing, Kinesis Firehose, VPCs, AMIs, and FSx.
- Provisioned scalable, highly available multi-tier architectures in AWS, leveraging best practices for security, resilience, and cost optimization.

EDUCATION

M. Tech in Computing Systems and Infrastructure

Birla Institute of Technology & Science, Pilani

Apr 2019 - Nov 2022

Bachelor of Computer Applications

Magadh University, Bodh Gaya

Aug 2015 - Sept 2018

CERTIFICATIONS

- AWS Certified Solutions Architect - Professional
 - AWS Certified Well Architected Proficient
 - Harness Certified Continuous Delivery & GitOps Developer
 - IBM Certified Terraform Developer on IBM Cloud
-

INTERESTS

- Mentoring & Tech Community Engagement
 - Continuous Learning
 - Travel & Photography
 - Fitness & Mindfulness Practices (Yoga, Meditation)
-

LANGUAGES

- English, Hindi & Maithili
